

WE SELL “P-FREE” LAKE-FRIENDLY LAWN CARE PRODUCTS!

Don't “P” on Your Lawn! Phosphorus (P) is a nutrient found in many fertilizers that feeds algae blooms in lakes.

Switch to “P-free” fertilizers and pick up a “Healthy Lawn Tips” brochure here.

Algae blooms or clear water? Your choices can make a difference!

LOOK FOR THE ZERO!

The three numbers on fertilizer bags show the nitrogen-phosphorus-potassium (N-P-K) nutrient analysis. The middle number is the phosphate (phosphorus) content. A “zero” in the middle means it is phosphorus-free. **Most established northeastern lawns only need nitrogen to stay healthy!**
