

Easy tips for a lush, green lawn

Cut lawn to 3 inches

This will allow roots to grow deeper, aerating the soil and helping the soil hold more water.

Leave the clippings

Grass clippings provide natural fertilizer

Remove only 1/3 of the grass blade

This reduces stress to the lawn and provides drought resistance.

Long Grass + Long Roots + Healthy Soil = Clean Water

Raising the blade on your mower to 3” is good for your LAWN, SOIL and the LAKE!

Grass that reaches our ankles supports a strong root system and helps build healthy soils.

Longer grass and healthy soils benefit Lake Champlain by filtering stormwater runoff.

Mow Higher!
